

BAYOMETRIC

The Biometric Solution Provider

Case Study – Bayometric’s biometric technology helps NGO Vishvas Foundation to speed its registration

Overview

Bayometric’s tried and trusted biometric technology has helped Vishvas Foundation, a non profit organization, to improve its registration process leading to cost savings and better customer service.

Vishvas Foundation, established in 1978, is an international umbrella organization with more than 36 schools and colleges. In addition to the Vishvas Education Board, it also manages Free Schools, Orphan Homes, Women’s Workforce Development Centres, Computer Centres, Medical Foundations, Eye Foundations, Hospitals.

Problem

The foundation conducts seminars in the far flung rural areas of the country, attended by the elderly and the young alike. However, with thousands attending the course daily, it became increasingly difficult for it to keep tab on the visitors using manual forms. This often led to duplication of data causing delays and wastage of time and money.

Solution

Bayometric’s fingerprint based biometric visitor registration solution helped the educational foundation improve its registration process helping in quicker identification of the attendees. The biometric based visitor attendance platform, which runs on VB6 and SQL Server, has helped the NGO to manage its seminars very efficiently.

The second phase of project will see centralizing of all data on a secured server. Once this is done, automated hand held devices with identification modules will also be used as part of the system. This would help in updating the data on the server in a real time environment.

According to the foundation, Bayometric’s proven and tried technology is compatible with most scanners available in the market providing cost effective solution to its needs. The foundation has high hopes on the visitor attendance application as in a very short time the system is already saving resources for the organization and has made registration process fast, simple and efficient.

About Bayometric

Bayometric (www.bayometric.com) is one of the market leaders in the development and implementation of non intrusive biometric technology using fingerprint, face, iris, voice and signature verification. It also provides customized software solutions that can be seamlessly incorporated into the existing security environment, providing unmatched security solutions. Bayometric’s FBI certified and award winning products are ruggedly built-ideal for capturing data in all types of environments.

“Bayometric’s technology supports many different scanners and makes the verification process fast. It is also cost effective compared to other products and their solution provided us with really great features. We are really happy with the speed and quality of identification. Their system has really helped in streamlining our visitor attendance program. Your quality of service has been exceptional and I would recommend highly your system to any organization looking for Biometric solutions”
